

ideal (statevector) ibm_kingston (mean of 3) ibm_marrakesh (mean of 3) solution states

(a)

5-variable K-SAT, $k = 1$: ideal $P(\text{solution}) = 0.646$

(b)

6-variable K-SAT, $k = 1$: ideal $P(\text{solution}) = 0.371$
