

ideal (statevector) ibm_kingston (mean of 3) ibm_marrakesh (mean of 3) solution states

(a)

5-variable K-SAT, $k=2$: ideal $P(\text{solution}) = 1.000$

(b)

6-variable K-SAT, $k=3$: ideal $P(\text{solution}) = 0.998$
